Metastasi Ossee

La chemioterapia

metàstasi — *gr.* METÀSTASIS *trasposizione, cambiamento*, comp. di METÀ *al di là, ra* e STÀSIS *stato, posizione*, da I-STÈ-MI *ui fermo, mi colloco* (v. *Stare*).

Term. di medic. Il cambiamento di sede di una malattia, ovvero Trasporto di una materia morbosa dalla parte che essa occupava verso di un'altra.

Deriv. *Metastàtico.*

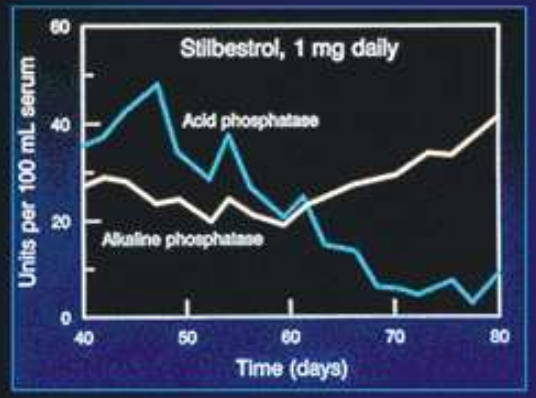
Charles Huggins and Hormonal Treatment of Prostate Cancer



Historical Article

PROSTATE CANCER: A BRIEF HISTORY AND THE DISCOVERY OF HORMONAL ABLATION TREATMENT

BERNARD LYTTON

Metastasi Ossee
La chemioterapia

Classics in Oncology

Charles Brenton Huggins
(1901-)

relationship between hormones and cancer of the prostate. Huggins and Hodges showed that prostatic cancer was dramatically affected by castration or administration of estrogens, treatment which reduced the levels of acid phosphatase. Huggins' observation that the synthetic estrogen diethylstilbestrol caused regression in disseminated prostatic cancer initiated the era of cancer chemotherapy.

The following reprinted paper was the

conclusions

In the clinic, chemotherapy and bisphosphonates are not given in any particular sequence, and tratment intervals vary; preclinical data indicate that to achieve maximum effects from the combination of treatments, the sequence and the timing of drug administration have an important role and could determine the efficacy of the therapy, both in advanced disease and in the adjuvant setting.
