Abstract:

Background: Following curative resection of gastric or GEJ adenocarcinoma, INT-0116 demonstrated superior survival for pts who received postoperative bolus 5-FU and leucovorin (LV) before and after concomitant 5-FU and RT compared to surgery alone. We assessed whether a postoperative chemoRT regimen that replaces 5-FU/LV with a potentially more active systemic therapy (ECF) improves overall survival (OS). **Methods:** Patients with resected gastric or GEJ adenocarcinoma were assigned to receive either FU-LV + RT (5-FU c.i.) or ECFx1 + RT (5-FU c.i.) + ECFx2.

FU-LV + RT (5-FU c.i.)

VS

ECFx1 + RT (5-FU c.i.) + ECFx2

2°-3° ECF dose ridotta

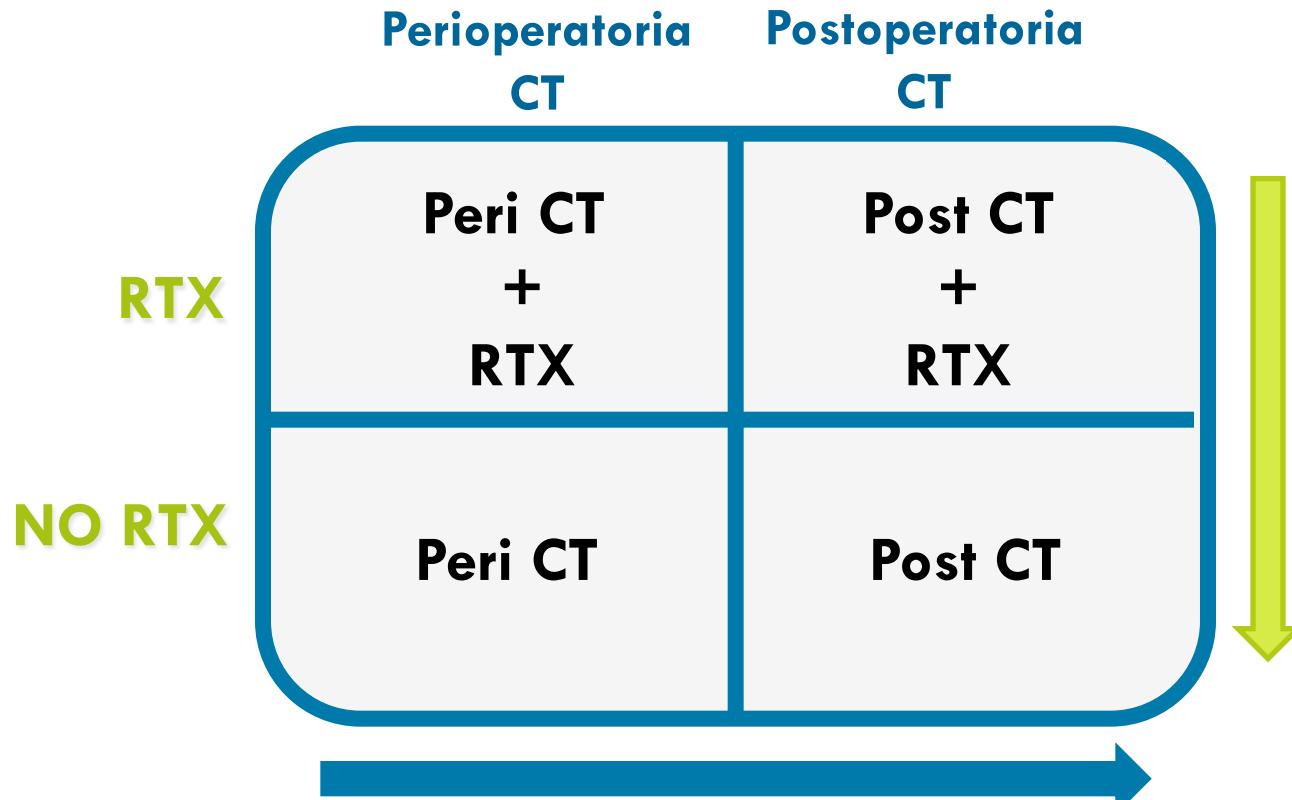

Randomizzazione

ITACA-S 2

I pazienti saranno stratificati
per centro, stadio di malattia,
performance status

1. CHT peri-operatoria o CHT post-operatoria

2. RTX post-operatoria o nessun trattamento radioterapico

CHT a scelta tra:

EOX

E: epirubicina 50 mg/m² IV (bolus), die 1

O: oxaliplatinio 130 mg/m², (2-3 ore i. e.), die 1

X: capecitabina 625 mg/m² somministrazione continua po, die 1-21

ECF

E: epirubicina 50 mg / m² IV (bolus), die 1

C: cisplatino 60 mg / m² in infusione (e.v.) die 1

F: fluorouracile 200 mg / m² somministrazione per infusione continua die 1-21

✓ RTX

45 Gy

sommministrati in frazione giornaliera di 1.8 Gy, 5 volte a settimana per 6 settimane.

CHT concomitante a scelta tra:

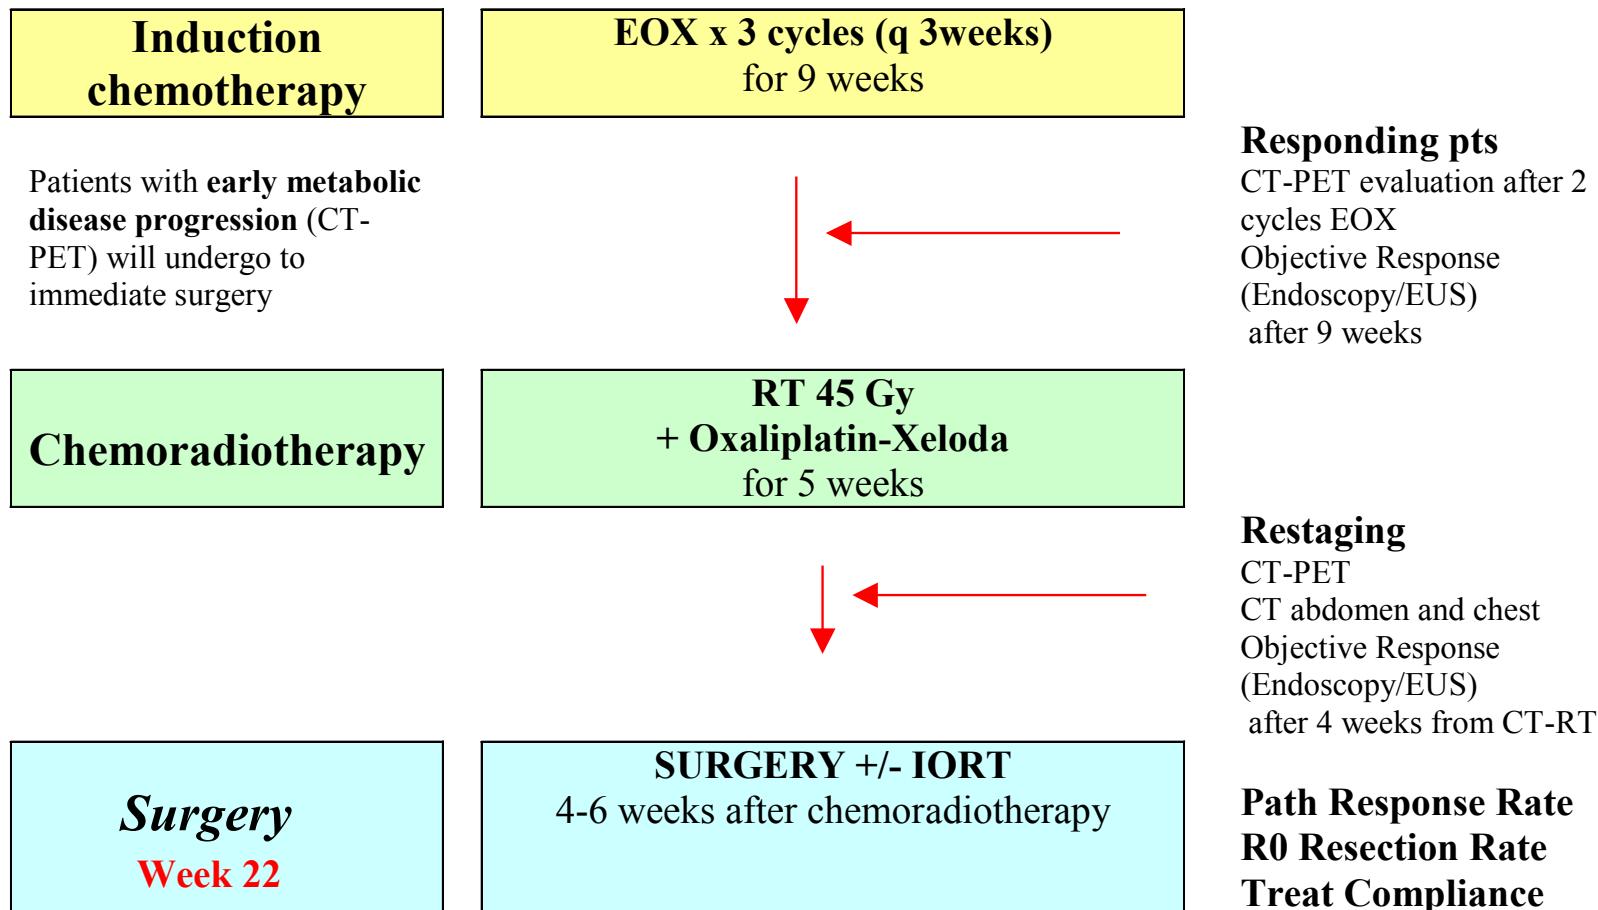

- 5-FU 225 mg / m² somministrato in infusione continua i.v.

- ✓ capecitabina 825 mg / m² somministrata 2 volte die po

TRATTAMENTI

NEOX-RT Study

**Patients with locally advanced $uT3-4, N0$ or any $uT, N+M0$ (LPS)
potentially resectable, locally advanced gastric cancer**

Malnutrizione

- 85% dei pazienti affetti da neoplasie gastroenteriche manifesta calo ponderale
- Nel 30% dei pazienti la perdita di peso è > 30%
- Nel 30% dei pazienti operati la malnutrizione condiziona il trattamento adiuvante (aumento della tossicità fino al decesso)

Conclusioni:

Come contenere la tossicità nei trattamenti integrati del
Carcinoma Gastrico?
