**Padova, 8-11 Novembre 2014**

## Background

Obiettivo

Materiali e  
Metodi

Risultati

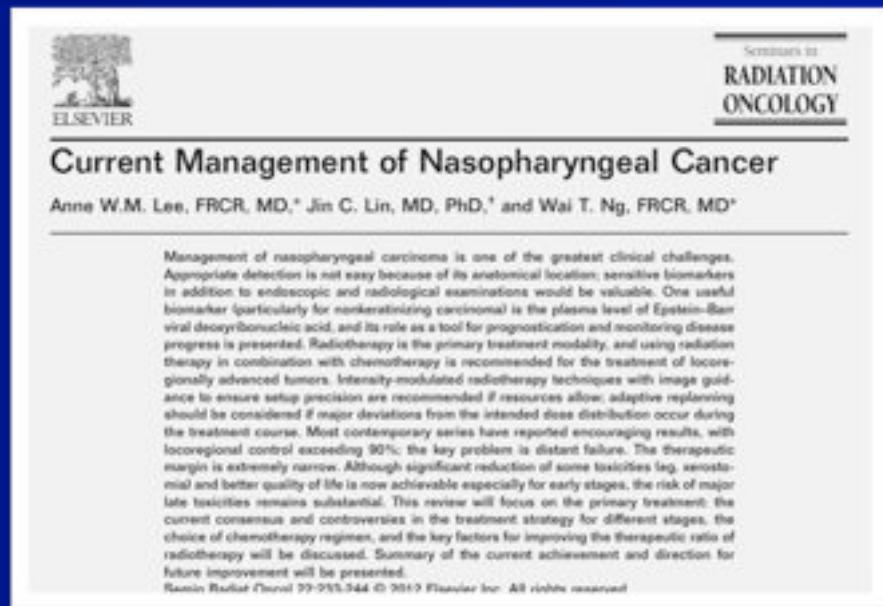

Conclusioni

- **Concomitant RTCT:**  
20% increase in OS

- **Adj Chemotherapy**  
has no benefit for OS  
or EFS

- **Induction chemotherapy** though achieved high RR failed to show improvement in OS

IC, induction chemotherapy; CCRT, concurrent chemoradiotherapy; AC, adjuvant chemotherapy; AACR, American Association of Cancer Research; UNCC, Union International Cancer Control; RTOG, radiation oncology group of the American Society of Clinical Oncology.

## Conclusion:

....induction chemotherapy followed by concurrent chemoradiotherapy was well tolerated but could not significantly improve prognosis in terms of OS, LC, MFS.

VOLUME 27 • NUMBER 2 • JANUARY 10 2009

JOURNAL OF CLINICAL ONCOLOGY      ORIGINAL REPORT

Randomized Phase II Trial of Concurrent Chemotherapy followed by concomitant Radiotherapy versus Radiotherapy alone and weekly cisplatin in patients with nasopharyngeal carcinoma: a randomized phase II study conducted by the Hellenic Cooperative Oncology Group (HeCOG) with biomarker evaluation
